About this Course

Key Components of Llamafile

Developing Portable CLI with Cosmopolitan

✓ **Reading:** Key Terms
1 min

✓ **Video:** Building a phrase generator with cosmopolitan
3 min

📄 **Lab:** Portable CLI
10 min

📖 **Reading:** Bash Phrase Generator
5 min

✓ **Graded Assignment:** Quiz-Portable CLI with Cosmopolitan
Submitted

📖 **Reading:** Lesson Reflection
5 min

Running Llamafile

Conclusion and Next Steps

Key Terms

Header Files - Declare functions from standard C libraries like stdio and string

Arguments (argc/argv) - Command line arguments passed to C programs

strcmp() - Compare two strings for equality

atoi() - Convert string to integer number

Modularity - Separating programs into reusable functions

Portability - Support for running on multiple platforms

example c cli

```
1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <time.h>
4
5  // Fruit name array
6  char* fruits[] = {"Apple", "Banana", "Orange"};
7
8  // Generate random fruit phrases
9  void phrase_generator(int count) {
10
11      srand(time(NULL));
12
13      for(int i = 0; i < count; i++){
14
15          // Pick random index
16          int index = rand() % 3;
17
18          // Print fruit
19          printf("%s\n", fruits[index]);
20
21      }
22
23  }
24
25  // Main function
26  int main(int argc, char **argv) {
27
28      int repeatCount = 1;
29
30      if(argc > 1) {
31          repeatCount = atoi(argv[1]);
32      }
33
34      phrase_generator(repeatCount);
35
36      return 0;
37
38  }
```

Run

Reset

Apple
