About this Course

Key Components of Llamafire

Developing Portable CLI with Cosmopolitan

Running Llamafire

Conclusion and Next Steps

 **Reading:** Key Terms
1 min

 **Reading:** Llamafire server
5 min

 **Reading:** Course Conclusion
5 min

 **Graded Assignment:** Final Quiz-Llamafile Submitted

 **Reading:** Next Steps
1 min

 **Lab:** Interactive Llamafire Sandbox
1h

Key Terms

- **API endpoint:** A URL that accepts requests to interact with the language model
- **Command line option:** A flag or parameter passed when running the server to configure settings
- **Context size:** The number of tokens of context to consider during text generation
- **Tokenization:** The process of splitting text into individual tokens that the model understands
- **Embedding:** A numerical representation of text that captures its semantic meaning
- **REST API:** An architectural style for designing networked applications using HTTP requests
- **Multimodal:** Involving multiple types of data like text and images in the same model

Python Request Example

```

1 import requests
2
3 # Define API endpoint URL
4 url = "http://localhost:8080/completion"
5
6 # Set up prompt with fruit theme
7 prompt = "The banana is a delicious"
8
9 # Configure parameters as command line options
10 params = {
11     "prompt": prompt,
12     "max_tokens": 10,
13     "temperature": 0.8,
14     "stop": ["\n"]
15 }
16
17 # Send POST request to API endpoint
18 response = requests.post(url, json=params)
19
20 # Print generated completion
21 completion = response.json()["content"]
22 print(completion) # Output: " and nutritious fruit. It is rich"

```

Call endpoint

```
1 # Tokenize text with fruit theme
2 curl http://localhost:8080/tokenize \
3     -H "Content-Type: application/json" \
4     -d '{"content": "Strawberry pie with whipped cream"}'
5
6 # Output: [15043, 1988, 1207, 2611, 11850]
```
