Correct

Correct. The cosmocc command compiles C code into a Cosmopolitan portable binary.

2. How does the phrase generator handle the count argument?

1 / 1 point

100%

Handled the count argument by repeating the desired number of iterations.

View submission

See feedback

A for loop from 0 to count

A while loop checking a counter

Recursively calling itself

A fixed number of 10 repeats

Correct

Correct. A for loop iterating from 0 to the count argument handles repeating the desired number of phrase iterations.

3. What does the atoi() function convert in this program?

1 / 1 point

The count string to an integer

The phrase to an integer

The arguments into integers

The output to an integer

Correct

Correct. atoi() converts the count command line argument from a string to an integer number.

4. How could the phrase repeater be extended to handle additional use cases?

1 / 1 point

Support repeating file input

Add language translation

Build a web interface

Enable multi-line phrase repeats

Correct

Correct. Handling multi-line strings would expand on the basic single line support.

5. Which concept facilitates cross-platform support with Cosmopolitan?

1 / 1 point

Java bytecode

Python interpreter

Docker containers

APE binaries

Correct

Correct. The APE format outputs portable binaries supported natively across platforms.
