Optional Readings: Sampling Methods, Bindings, and Quantization

- This is a scholarly paper which provides a more detailed discussion of sampling methods for large language models.
 - [Holtzman, A., et al. \(2020\). The Curious Case of Neural Text DeGeneration](#)
- The llama.cpp python bindings provide an API for interaction with llama.cpp. This page should be your first stop if you have questions about the various parameters available in the llama.cpp python interface. Keep in mind that, as time progresses, the llama-cpp-python bindings in this course will not reflect the latest bindings available on the web, and you may want to refer to the documentation which was accurate as of early 2024.
 - [Llama.cpp python bindings](#)
 - [Python Bindings documentation](#)
- This is the llama.cpp project github, where all development and documentation are stored. This page provides detailed information about the project, including how to quantize models and compile on your own hardware. Keep in mind that, as time progresses, the llama-cpp-python bindings in this course will not reflect the latest bindings available on the web, and you may want to refer to the documentation which was accurate as of early 2024.
