

Java - String Buffer insert() Method

Advertisements

[⬅ Previous Page](#)[Next Page ➡](#)

Description:

This method removes the characters in a substring of this StringBuffer. The substring begins at the specified start and extends to the character at index end - 1 or to the end of the StringBuffer if no such character exists.

If start is equal to end, no changes are made.

Syntax:

```
public insert(int offset, char[] str)
public StringBuffer insert(int index, char[] str,
                           int offset, int len)
public StringBuffer insert(int offset, float f)
public StringBuffer insert(int offset, int i)
public StringBuffer insert(int offset, long l)
public StringBuffer insert(int offset, Object obj)
public StringBuffer insert(int offset, String str)
```

Parameters:

Here is the detail of parameters:

Parameter depends on what you are trying to insert.

Return Value:

This method Returns the modified StringBuffer object.

Example:

```
public class Test {  
  
    public static void main(String args[]) {  
        StringBuffer sb = new StringBuffer("abcdefghijk");  
        sb.insert(3, "123");  
        System.out.println(sb);  
    }  
}
```

This produces the following result:

abc123defghijk
