Signal resampling

CK Chris Kovach Learner

3 years ago

On the signal resampling my output matches the example, but I'm getting an error, saying y is wrong and T is (length of x-1) divided by xFs. Help.

My code for T: `len=length(x); T = (len-1)/xFs;`

Output

y =

1.0000	1.5000	2.0000	2.5000	3.0000	3.5000	4.0000	4.5000	5.0000
--------	--------	--------	--------	--------	--------	--------	--------	--------

Assessment: 0 of 1 Tests Passed

✖ Is output y correct?

Variable y has an incorrect value.

T should be the (length of x minus 1) divided by xFs

tx, ty, x, and y should each be a row vector

--removed code--

```
y = interp1(tx,x,ty,'spline');
```

--removed code--
