Reverse Audio

Review Learning Objectives

1. Download the attached '.mat' file file and load it into MATLAB using 'load'. It contains an audio signal y_rev with sampling frequency fs. y_rev contains an audio signal that has been reversed. Re-reverse the signal to obtain 'y', which is a restored version of the original signal. Play 'y' using 'soundsc'. Answer either by (a): typing the second spoken word in the restored audio clip, or (b): typing the index to the location of the maximum value in 'y'

P11: This recording was made using MATLAB's 'audiorecorder' function in my desktop version of MATLAB. If you have the desktop version and a microphone on your computer, give it a try to create your own audio files!
