

Module 5 Summary

After completing all of the materials, please take a moment to reflect on what was covered. The learning objectives below capture the key takeaways from this module:

- Define a kernel smoothing method.
- Describe the k-Nearest Neighbors model.
- Explain why kNN is not a kernel smoothing method.
- Describe the general setup for a kernel smoothing method.
- Define local linear regression.
- Define local polynomial regression.
- List their hyperparameters.
- Describe their strengths and weaknesses.
