Module 0: Introduction

Lesson 1: Additive Models and Trees

Lesson 2: Support Vector Machines

Lesson 3: k-Means Clustering

Reading: k-Means Clustering Readings (0)

Video: k-Means Clustering (0)

Practice Assignment: k-Means Clustering Quiz Submitted

Lab: Coding Exercise (0)

Lab: Coding Exercise (0)

Lesson 4: Neural Networks

Module 5: Summative Assessment

Module 5 Summary

Your grade: 100%

Your best: 100% - Your highest score

k-Means Clustering Quiz

Instructions

Review Learning Objectives

1. What is the primary objective of the k-means clustering algorithm?

- ☐ To predict the outcome for a dependent variable.
- ☐ To reduce the dimensionality of the dataset.
- ☐ To classify data points into predefined categories.
- ☒ To partition the dataset into k clusters such that each data point belongs to the cluster with the nearest mean.

☒ Correct: The goal of k-means is to divide data into clusters based on the proximity to the cluster centroids.

Your grade

To pass you need at least 80%. We keep your highest score.

1 / 1 point

2. In k-means clustering, how is the number of clusters (k) determined?

- ☒ It is specified by the user and represents the number of clusters to form.
- ☐ It is automatically determined by the algorithm based on the data.
- ☐ It is calculated based on the distance between centroids.
- ☐ It represents the maximum number of iterations the algorithm will run.

☒ Correct: The number of clusters, k , is a user-defined input in k-means.
