Module 2 Introduction

Lesson 1: Linear Regression and Least Squares

Lesson 2: Modification of Linear Regression: Subset Selection

Reading: Modification of Linear Regression: Subset Selection Readings 2h

Video: Subset Selection 8 min

Practice Assignment: Modification of Linear Regression: Subset Selection Quiz Submitted

Lab: Coding Example 1h

Lab: Coding Exercise 1h

Lesson 3: Coefficient Shrinkage for Linear Regression: Ridge Regression and LASSO

Lesson 4: Data Transformations and Linear Regression

Module 2 Summative Assessment

Module 2 Summary

Your grade: 100%

Your latest: 100% • Your highest: 100% • To pass you need at least 80%. We keep your highest score.

Modification of Linear Regression: Subset Selection Quiz

Instructions

Review Learning Objectives

1. Which subset selection method evaluates all possible models with all possible combinations of predictors before choosing the best one? **1 / 1 point**

- (•) Best subset selection
- () Backward stepwise selection
- () Forward stepwise selection
- () Least angle regression

Correct

2. What is a drawback of the best subset selection method in the context of subset selection in linear regression? **1 / 1 point**

- () It only evaluates a single predictor at a time.
- () It does not consider the possibility of interactions between variables.
- () It starts with the full model and works backward.
- (•) It is computationally expensive for datasets with a large number of predictors.

Correct

Your grade

3. Which subset selection method can be particularly useful when the number of predictors is large, making best subset selection computationally infeasible? **1 / 1 point**

- (•) Forward stepwise selection.
- () Best subset selection
- () Backward stepwise selection
- () All of the above

Correct
