Module 2

Nuts and Bolts of HPC

Module 3

Basic Parallelism

Module 4

Evaluating Parallel Program Performance

Programming assignment

Practice Assignment Submission

This will start your JupyterLab environment. Work this week in the directory "projects/week1-practiceLab"

Instructions for the Practice Lab

In this lab you are getting familiarity with JupyterLab. This is the environment that you will be using throughout this course and it is helpful to familiarize yourself with that environment.

Our JupyterLab has the capability to submit a file to the autograder. In this assignment you will practice submitting a file and observing what happens if a submission fails. One of the submissions will succeed.

1. Navigate to your `~/projects/week1-practicelab` directory.
2. Create a bash script called `bash_assignment.sh`.
3. Create a text file called `practice_file.txt`. Add the line "I started learning high-performance computing." into that file.
4. Create a notebook called `bash_notebook.ipynb`.
5. Submit `bash_notebook.ipynb`.
6. Submit `practice_file.txt`.
