Instructions

In this assignment, you will analyze criminal incident data from Seattle or San Francisco to visualize patterns and, if desired, contrast and compare patterns across the two cities.

You will produce a blog-post-style visual narrative consisting of a series of visualizations interspersed with sufficient descriptive text to make a convincing argument.

The assignment will be assessed by peer review. The rubric for assessment will include questions about the effectiveness and clarity of your argument, your use of visualization, and the completeness of your analysis. Reproducibility will also be considered, but will be evaluated subjectively -- peer reviewers will not be asked to recreate your results.

(Coursera limits the number of characters one can use here.)

Review criteria

less ^

You will review the effectiveness and clarity of the argument, the proper use of visualization principles and concepts, and the completeness of the analysis.
