Solving Problems by Describing Photos

What Could YOU Do with GPT Vision?

Take a photo of something around you or that you took in the past. Then, upload it with this prompt to GPT Vision:

""

Describe in detail what is seen in this photo. Give me a detailed listing of what is in the photo and how using Generative AI to analyze them, extract information, detect things, find similarities & discrepancies, etc. could profoundly change tasks that I do everyday. Then, ask me questions about what I do professionally and the industry I am in. After I give you my answers, create three ideas for photos that you could take and the prompt you would provide with them to GPT-4V (Vision) to solve a real-world problem in my industry.

""

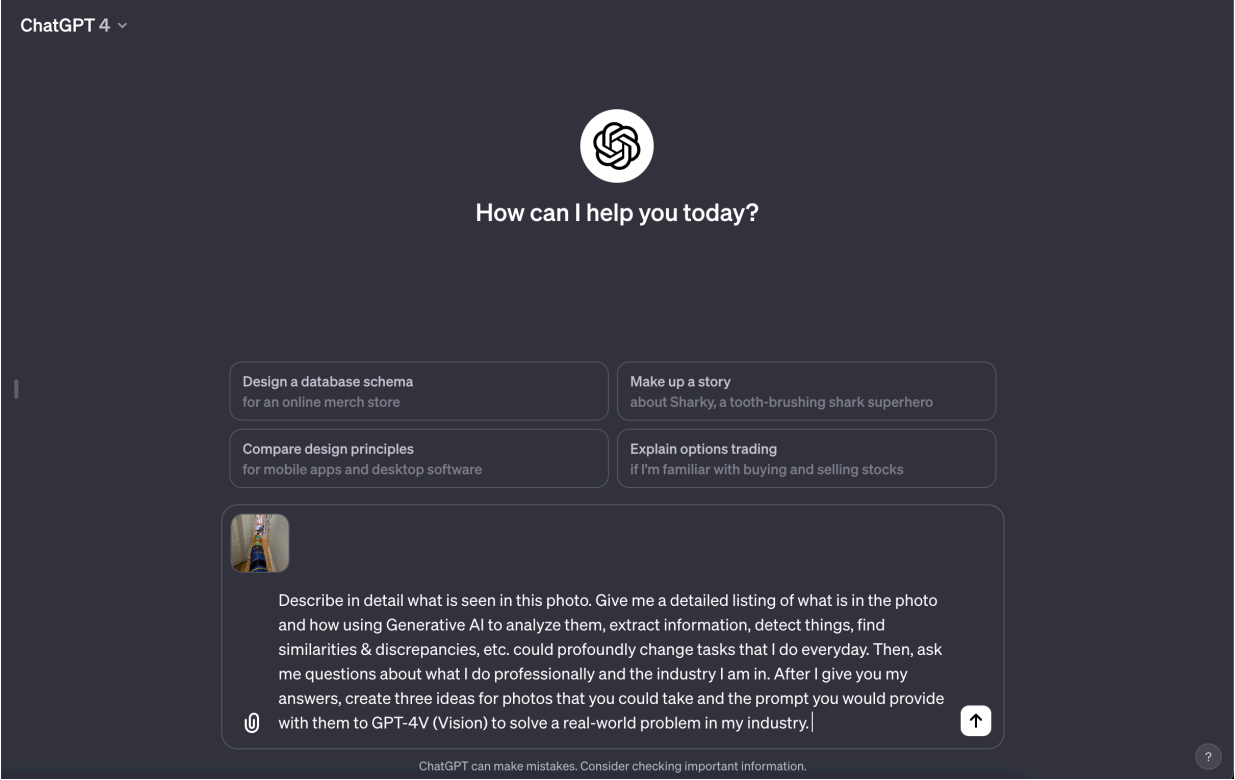

This is how to do it:

1. Make sure that GPT-4 is selected in the upper right-hand corner

2. Click the paper clip icon and select a photo.

3. Cut/paste the prompt in as the message: "Describe in detail what is seen in this photo. Give me a detailed listing of what is in the photo and how using Generative AI to analyze them, extract information, detect things, find similarities & discrepancies, etc. could profoundly change tasks that I do everyday. Then, ask me questions about what I do professionally and the industry I am in. After I give you my answers, create three ideas for photos that you could take and the prompt you would provide with them to GPT-4V (Vision) to solve a real-world problem in my industry. "

4. It should look like this once the photo and the prompt are added:
