Visual Intelligence

100%

100%

100%

To pass you need at least 80%. We keep your highest score.

1. Take a series of two pictures where something changed between the two pictures. This could be a set of selfies, items laid out on a table, etc. Ask GPT Vision for a list of things that changed between photos. Cut/paste the output in (not the photos) as the answer.

Similarities:

Submitted

Apr 18, 3:12 AM IST

Both images show a person with their face obscured by a brown rectangle for privacy reasons. The person is wearing a white t-shirt with some graphic design on it. They are carrying what appears to be a black shoulder bag. The background seems to be an indoor setting with people and architectural elements.

Differences:

To pass you need at least 80%. We keep your highest score.

In one of the images, there is artwork visible through the glass in the background. The positioning of the person and the surrounding people may vary slightly between the two images. Overall, the images are nearly identical, emphasising privacy while capturing the person's attire and surroundings

2. Take the same photo and query it multiple times for different pieces of information. In the first prompt with the photo, ask for an inventory of everything present in the scene. In the second prompt with the SAME photo, ask for a description of where things are located in the photo relative to each other.

List the inventory of everything present in the scene

Certainly! Here's the inventory of items present in the scene:

Sofa: A gray sofa with cushions.

Cushions: Three cushions on the sofa; two are off-white, and one is red with patterns.

Painting: An abstract painting framed and hung on the wall above the sofa.

Side Table: A white round side table next to the sofa.

Glass of Water: A clear glass filled with water on the side table.

Oranges: A small bowl containing what appears to be oranges on the side table.

Curtains: Floor-length white curtains partially drawn to the right of the sofa.

Where are the glass of water and tables are relatively located?

The glass of water is located on the side table, which is positioned in front of the sofa. The side table is to the right of the sofa.

3. Create a "detector" to see if something is in a photo. Take a photo and build a prompt to detect things, like "Is there a person in this photo? YES/NO". You will need to experiment to get a good detector. Cut/paste your detector prompt (not the photos) as the answer.

Is there a person in this photo? YES/NO

YES
