1. What is the purpose of an activation function in a neural network? 1 / 1 point

- Calculating the loss of the network
- Normalizing the input data
- Introducing non-linearity into the network
- Initializing the weights of the network

Nice work

2. True or False: RNNs process all inputs simultaneously. 1 / 1 point

- False
- True

Nice work

3. What is the purpose of the learning rate in stochastic gradient descent? 1 / 1 point

- To determine the number of epochs for training
- To control the size of the steps taken during optimization
- To initialize the model parameters
- To calculate the loss function

Nice work

4. What does the Kullback-Leibler divergence measure? 1 / 1 point

- Difference between two accuracy values
- Divergence between two probability distributions
- Divergence between a model's hidden states and the output probabilities
- Certainty of a model

Nice work

5. What is the derivative of $3x+10$ with respect to x? 1 / 1 point

- 3x
- 30
- 10
- 3

Nice work
