Transformer Models
Practice Assignment • 15 min

Due Nov 11, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

Next item →

1. What is a benefit transformers have over RNNs? 1 / 1 point

- They have more parameters
- They are smaller
- They are better at preserving privacy
- (selected) They enable more parallelization

Nice work

2. Which tasks were transformers originally proposed to? 1 / 1 point

- Language modeling
- Sentiment analysis
- (selected) Machine translation
- Grapheme-to-phoneme conversion

Nice work

3. True or False: The original transformer model was an encoder-only model. 1 / 1 point

- (selected) False
- True

Nice work

4. What is the purpose of positional encoding in transformer models? 1 / 1 point

- To increase the model's vocabulary size
- To normalize the input embeddings
- To reduce computational complexity
- (selected) To add information about word order in the sequence

Nice work

5. What is the benefit of using multiple attention heads in multi-head attention? 1 / 1 point

- It improves the efficiency of backpropagation
- It ensures that no information is lost during training
- It allows the model to process multiple batches simultaneously
- (selected) It allows the model to focus on different parts of the sequence simultaneously

Nice work
