1. What do we mean when calling a setting “low-resource”? 1 / 1 point

- A setting in which training the lower layers of a network leads to larger gains than training higher layers
- A setting in which we do not have enough data to train state-of-the-artarchitectures in a straightforward way
- A setting in which we apply training tricks only to lower parts of the network for efficiency or performance reasons
- All of the above

Nice work

2. Which of the following statements about pretraining is incorrect? 1 / 1 point

- Any data can be used for pretraining, though some might be more effective than others
- Ideally, pretraining tasks are related to the target tasks
- Pretraining tasks often have more data than target tasks
- Pretraining on more than one task usually leads to a decrease in performance

Nice work

3. Which network architecture is not part of the ELMo model? 1 / 1 point

- Convolutional neural network
- Bidirectional LSTM
- Transformer
- All of the above are in fact components of ELMo

Nice work

4. Which tasks can GPT and GPT-2 be used for? 0 / 1 point

- Sentence classification tasks
- Entailment
- Multiple-choice question answering
- All of the above

Try again

5. What is the main difference between GPT and GPT-2? 1 / 1 point

- The model architecture
- The size of model and training data
- The training task
- All of the above

Nice work
