Transfer Learning
Graded Assignment • 15 min

Due Nov 18, 11:59 PM IST

Your grade: 100%

Your latest: 100% • Your highest: 100% • To pass you need at least 80%. We keep your highest score.

Next item →

1. What is pretraining? 1 / 1 point

- Everything that needs to be done before training can be started, such as designing and implementing the model, but also preparing the training data
- Preparation of the data in order to get it into the right format for training
- Training on a subset of the training set for a couple of epochs to give the model a quick overview of the task before training on all available data
- Training on data from a task that is not the target task but often related to it

Nice work

2. What do ELMo and GPT have in common? 1 / 1 point

- They share the same model architecture
- They are both pretrained models
- They were developed by the same lab
- The have the same number of parameters

Nice work

3. Task combinations in multitask learning should ideally: 1 / 1 point

- Be completely unrelated
- Use datasets of the same size
- Require identical model architectures
- Share some common features or knowledge

Nice work

4. What is the main advantage of multilingual pretrained models over translation-based approaches? 1 / 1 point

- Faster training
- No need for parallel data
- Simpler implementation
- Guaranteed better accuracy

Nice work

5. True or False: Some multilingual pretrained models have been trained on 100 or more languages. 1 / 1 point

- False
- True

Nice work
