

Write MATLAB code to evaluate the sigmoid function at given points

The sigmoid function

$$y = \frac{1}{1 + e^{-x}}$$

is commonly used in neural networks as an activation function. It takes a real number x as input and maps it to a value in the range of $[0, 1]$. Plotting the sigmoid function for x in the range $[-10, 10]$ results in the following figure.

In this assignment, your task is to write a MATLAB script that will:

- Calculate the sigmoid function values for the following inputs $x = [-5, -1, 0, 5.2, 10000]$.
- Assign the resulting values to an array y .

Script

Open Item in MATLAB Online

```
1 x = [-5, -1, 0, 5.2, 10000];
2 y = 1./(1+exp(-x));
3
```

Run Script

Tests: All Tests Passed

Submit

Has exp() been used?

Is the output correct?

Output

Code ran without output.
