1. Which of the following statements is not true regarding for and while loops in MATLAB?

1 / 1 point

- ☐ It is possible to nest loops such that the inner loop runs in every iteration of the outer loop.
- ☐ Loops allow specified sections of code to run repeatedly.
- ☐ It is possible to exit a loop using a break statement.
- ☒ It is impossible to put conditional (such as if) statements inside a loop.

✔ Nice work

2. Select all statements that are not true regarding custom MATLAB functions.

1 / 1 point

- ☐ They can return multiple variables as outputs.
- ☒ They can access variables that are not passed into the function as arguments.

✔ Nice work

- ☒ They can only return one variable as the output.

✔ Nice work

- ☒ They can directly access all variables from the workspace of the main MATLAB script calling custom MATLAB functions.

✔ Nice work

3. Which of the following statement is not true?

1 / 1 point

- ☐ Custom MATLAB functions have their own workspace (memory), which is separate from the main MATLAB script calling the custom MATLAB function.
- ☐ Custom MATLAB functions make MATLAB code easier to test and more reusable.
- ☐ Custom MATLAB functions need to be placed in separate files or at the bottom of the main MATLAB script.
- ☒ Custom MATLAB functions are used to make MATLAB code run faster.

✔ Nice work

4. Which of the following statements about the provided while loop is accurate?

1 / 1 point

`while true`

- ☐ The loop will not run at all, as the associated condition is true.
- ☒ Loop will repeat forever unless it is stopped by the break statement.
- ☐ The loop will run one iteration.
- ☐ The loop will repeat 100 times.

✔ Nice work

5. Which statement is not true about the following function declaration?

1 / 1 point

`function var_c = calc_var(var_a, var_2)`

- ☐ The function returns one variable, “var_c”.
- ☐ The function name is “calc_var”.
- ☐ The function takes two input variables.
- ☒ The function name is “var_c”.

✔ Nice work
