Welcome

- ## Module 7 Introduction

- Module 7-1 Machine Learning Fundamentals

- ## Module 7-2 Mapping Inputs to Outputs

- ### Module 7-3 MATLAB Implementation

- ## Module 7 Quiz

- ## Module 7 Assignments

- Module 2
-

Module 3

Data Preparation

Module 4

Support Vector Machines

Module 5

Artificial Neural Networks

00 0:02 / 0:50 2x

- Explain how you would encode at least one categorical variable and why that encoding is appropriate.

Based on this setup:

- Would a parametric model (e.g., linear regression) or a non-parametric model (e.g., KNN) be more suitable?
- What assumption are you making—or avoiding—by that choice?

Finally, explain **one way** prediction error could reveal that your representation or model choice is inadequate.
