

Linear model with an intercept

Use the dataset, build another linear model (model_2) with an intercept, which can predict the salary.
Then, use it to predict the salary for a person with 5 years of experience (salary_2).

MATLAB Documentation (https://www.mathworks.com/help/)

Open Item in MATLAB Online 

```
1 % Load data
2 data = readtable('salary_dataset.csv');
3 x = data(:, 'YearsExperience');
4 y = data(:, 'Salary');
5
6 % Try to use left array division (\) to achieve this
7 % Complete this part
8 X = [ones(length(x),1) x];
9 model_2 = X\y;
10 salary_2 = [1 5]*model_2;
11
```

▶ Run Script 

Tests: All Tests Passed

Submit 

-  Is the model correct?
-  Is the predicted salary correct?

Output

Code ran without output.
