Support Vector Machine Fundamentals: Types of SVM
Video • 4 min

Materials on Support Vector Machine
Fundamentals
Reading • 10 min

Support Vector Machines: Linear SVM of Hard
Margin Classifier
Video • 7 min

Support Vector Machines: Linear SVM of Soft
Margin Classifier
Video • 11 min

Support Vector Machines: Non-Linear SVM
Video • 12 min

Support Vector Machines: Multi-Class SVM
Video • 8 min

Materials on Support Vector Machines
Reading • 10 min

Support Vector Machine Implementation:
MATLAB Implementation of SVM
Video • 4 min

Support Vector Machine Implementation: Iris
Flower Example
Video • 5 min

Support Vector Machine Implementation: 2D
Point Classification Example
Video • 35 sec

Case Study 1: Banknote Classification (Linear SVM)
Video • 4 min

Case Study 2: Raisin Classification (Non-Linear SVM)
Video • 7 min

Materials on Support Vector Machine
Implementation and Case Studies
Reading • 10 min

Support Vector Machine Learning Coach
Dialogue • 5 min

Module 10 Quiz
Practice Assignment • 30 min

Module 10 Assignment 1
Graded App Item • 30 min

Module 10 Assignment 2
Graded App Item • 30 min

CSV file for Module 10 Assignment
Reading • 1 min

Module 10 Recap
Reading • 5 min

00 0:04 / 0:50 2x

Based on what you already know about **data preparation, model training, and evaluation**, discuss:

- Why might SVMs perform well even when the dataset is small or the number of features is large?
- In what situations would choosing an SVM be a better decision than using simpler models such as linear regression or k-nearest neighbors?
- Are there any practical limitations or challenges you anticipate when using SVMs in real-world engineering or science problems?

You are encouraged to connect your discussion to concepts from previous modules, such as feature scaling, overfitting, generalization, and model evaluation.
