Foundations of Statistical Learning & Algorithms

Today's goal • 3/3 items

Module 1
Introduction to Linear Algebra and Vector Spaces

Module 2
Linear Transformation and Matrix Decomposition

Linear Independence
- Understanding Linear Independence in Vector Spaces — Reading • 18 min
- Linear Independence, Basis, and Rank — Ungraded App Item • 20 min
- Linear Independence — Reading • 30 min

Linear Mapping
- Exploring Transformations: Understanding Linear Mappings — Reading • 1h
- Linear Mapping: Part 1 — Video • 8 min
- Linear Mapping: Part 2 — Video • 8 min
- Linear Mapping — Reading • 5 min
- Matrix Representation — Reading • 6 min
- Practice Quiz: Linear Mapping — Graded Assignment • Grade: 100%

Lesson 3: Eigenvalues and Eigenvectors
- Introduction to Eigenvalues and Eigenvectors — Reading • 40 min
- Eigenvectors and Eigenvalues: Examples and Applications — Reading • 30 min

Lesson 4: Cholesky Decomposition
- Cholesky Decomposition — Reading • 5 min
- Solved Examples — Reading • 10 min

Lesson 5: Singular Value Decomposition
- Introduction to Singular Value Decomposition (SVD) — Reading • 28 min
- Derivation of Singular Value Decomposition (SVD) from Eigenvalues and Eigenvectors — Reading • 15 min

Module 3
Probability Foundations for Statistical Learning

Lesson 1: Sum Rule, Product Rule, and Bayes' Theorem
- Sum Rule, Product Rule, and Bayes' Theorem — Reading • 15 min
- **Sum Rule** — Reading • 4 min
- Product Rule (Chain Rule) — Reading • 2 min
- Bayes' Theorem — Reading • 43 min

Lesson 2: Gaussian Distribution
- Univariate Gaussian Distribution — Reading • 4 min

Sum Rule

0:10 / 0:37 2x

The sum rule is a fundamental rule in probability theory that allows the calculation of the probability of an event by summing the probabilities of mutually exclusive events that cover the entire sample space.

Formula

$$P(A) = \sum_i P(A \cap B_i)$$

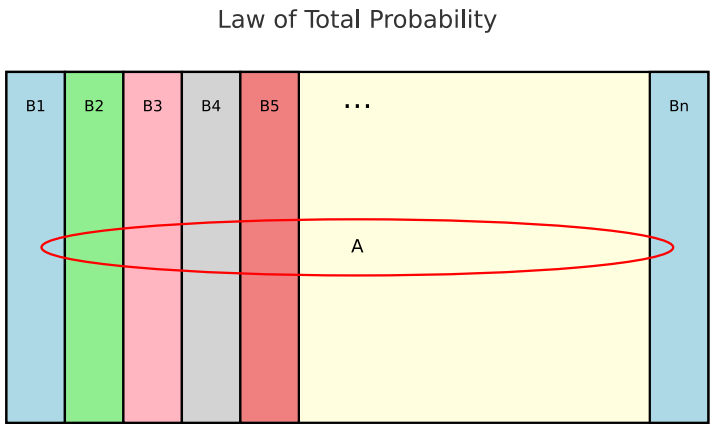

where B_i are mutually exclusive events that partition the sample space.

Special Case (Total Probability):

If $B_1, B_2, \ldots, B_n$ are mutually exclusive and exhaustive events (i.e., they cover the entire sample space), then:

$$P(A) = \sum_i P(A \mid B_i)\, P(B_i)$$

This is known as the **Law of Total Probability**.
