Natural Language Processing - Probability Models in Python

Today's goal • 3/3 items

Module 1
Welcome

Module 2
Markov Models

Module 3
Article Spinner

Module 4
Cipher Decryption

- Section Introduction
  Video • 4 min
- Ciphers
  Video • 3 min
- Language Models (Review)
  Video • 16 min
- Genetic Algorithms
  Video • 21 min
- Code Preparation
  Video • 4 min
- Code pt 1
  Video • 3 min
- Code pt 2
  Video • 7 min
- Code pt 3
  Video • 4 min
- Code pt 4
  Video • 4 min
- Code pt 5
  Video • 7 min
- Code pt 6
  Video • 5 min
- Cipher Decryption - Additional Discussion
  Video • 2 min
- Real-World Application: Acoustic Keylogger
  Video • 2 min
- Section Conclusion
  Video • 6 min
- **Conclusion to the Course 'Natural Language Processing - Probability Models in Python'**
  Reading • 10 min
- Cipher Decryption - Assessment
  Graded Assignment • 15 min
- Full Course Practice Assessment
  Practice Assignment • 15 min
- Full Course Assessment
  Graded Assignment • 1h

Conclusion to the Course 'Natural Language Processing - Probability Models in Python'

1:07 / 1:48 2x

Congratulations on completing the **Natural Language Processing - Probability Models in Python** course! Let's take a moment to recap the significant milestones you've achieved:

In this course, you explored Natural Language Processing (NLP) using probability models like Markov and language models. You gained hands-on experience building text classifiers, language prediction models, and cipher decryption algorithms using Python. Key topics included probability smoothing, log-probabilities, and the n-gram model for tasks like article spinning. You worked through practical coding exercises and deepened your understanding of NLP techniques. The course equipped you with the skills to apply these models to real-world NLP problems. By the end, you were proficient in implementing and applying probability models in Python.

As you continue to build on these skills, we recommend enrolling in the following courses that are part of our specialization title, Modern Natural Language Processing to further enhance your capabilities:

- **Natural Language Processing - Deep Learning Models in Python:** Explore deep learning models for Natural Language Processing (NLP) in Python, from foundational concepts to advanced applications. Learn to build and train neural networks using TensorFlow and apply them to real-world NLP tasks such as text classification and sentiment analysis.
- **Natural Language Processing - Transformers with Hugging Face:** Master Transformer models and their applications in NLP with Hugging Face in Python. Learn to implement text classification, generation, summarization, machine translation, and more, using cutting-edge models and techniques in real-world projects.

Thank you for being a part of this course. Keep up the great work, and happy learning!
