Transformers with Hugging Face - Assessment
Graded Assignment • 15 min

Due Nov 13, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 50%. We keep your highest score.

1. In simple question answering tasks, where is the answer typically found? 1 / 1 point

- From an external source.
- In a database of knowledge.
- Within the input text.
- Derived statistically from likely candidates.

Nice work

Correct! Answers are directly in the input for basic models.

2. Why might a sentiment analysis system exclude processing texts labeled as 'neutral'? 1 / 1 point

- Neutrality complicates the training process.
- Neutral texts lack meaningful emotional insights.
- Neutral texts increase computational complexity.
- Neutral texts skew algorithm performance negatively.

Nice work

Correct! Neutral texts don't contribute much emotional data for predictions.

3. What indicates that a Named Entity Recognition (NER) model is effective in predicting tags? 1 / 1 point

- It ignores inputs with high uncertainty.
- The predictions match the expected target tags closely.
- It only predicts one type of entity accurately.
- It predicts more tags than there are entities.

Nice work

Correct! This indicates the model is performing well.

4. What main advantage do attention mechanisms have over traditional RNNs in Natural Language Processing? 1 / 1 point

- They are immune to overfitting.
- They are inherently easier to interpret.
- They require less data to train effectively.
- They allow parallel computation and access any part of the input directly.

Nice work

Correct! This is a fundamental strength of attention mechanisms over RNNs.

5. What aspect of text does sentiment analysis evaluate? 1 / 1 point

- Acoustic properties
- Emotional tone and attitude
- Temporal characteristics
- Grammatical structure

Nice work

Correct! Sentiment analysis directly assesses the emotional tone.
