Quiz

coach

1. What is the problem that an encoder-decoder model solved before taking the quiz? I'm here to help. 1 / 1 point

Sequence-to-one problems such as spam detection where you use sequence of text to predict if an email is a spam

One-to-sequence problems such as image captioning, where you generate a few sentences based on one image

Sequence-to-sequence problems such as machine translation where you translate sentences to another language

None of the above.

Correct

To Pass: 80% or higher

2. What is the major improvement of BERT (Bidirectional Encoder Representations) compared to transformers? 1 / 1 point

BERT considers the order of the words in a sentence, whereas a transformer doesn't.

BERT is a sequence-to-sequence model, whereas a transformer is a sequence-to-one model.

BERT is a sequence-to-one model, whereas a transformer is a sequence-to-sequence model.

BERT doesn't consider the order of the words in a sentence, whereas a transformer does.

Correct

This option is correct

3. Which of the following is correct about large language models? 1 / 1 point

Large language models refers to both huge training datasets and many parameters.

Large language models can be pre-trained for general purpose and then fine-tuned for specific tasks.

Transformers and BERT are examples of large language models.

All of the above.

Correct

This option is correct
