SSH Keys

GITHUB

🐙

You are not connected to GitHub.

Connect accountUpload public key

BITBUCKET

🔑

You are not connected to Bitbucket.

Connect account

GOOGLE

🔑

You are not connected to Google.

Connect account

- Under GitHub, click on **Connect account**

- You will be using an SSH connection, so you need to click on **Upload public key**

Fork the Repo

- Go to the Dall-E lab repo. This repo is the starting point for your project.
- Click on the “Fork” button in the top-right corner.
- Click `create fork` green button.
- Click the “Code” button.
- Copy the **SSH** information. It should look something like this:

```
git@github.com:<your_username>/Dall-E_Lab.git
```

Important

If you do not use the SSH information, you will have to provide your username and Personal Access Token (PAT) to GitHub each time you push or pull from the repository. See this documentation for setting up a PAT for your GitHub account.

In the Terminal

- Clone the repo. Your command should look something like this:

```
git clone git@github.com:<your_username>/Dall-E_lab.git
```

- You should see a `Dall-E_Lab` directory appear in the file tree.

On the last page, we’ll show you how to push to GitHub.

You are now ready for the lab!
