Coding Exercise

Generate Image with GPT and DALL-E API

Objective: Write a Python function `generate_image(prompt)` that uses OpenAI's GPT API to enhance a user's text prompt and DALL-E API to generate an image based on that enhanced text, then saves this image as `my_img.png`.

Function Requirements:

Your function `generate_image(prompt)` should accomplish the following steps:

1. Accept a user's prompt as an argument.
2. Refine this prompt by passing it to the GPT API.
3. Generate an image from the refined prompt using the DALL-E API.
4. Save the generated image as `my_img.png`.

Your Python function must look like the template below:

def generate_image(prompt):

"""

This function accepts a user's prompt, enhances it using the GPT API, then

Parameters:

prompt (str): The initial user's prompt.

Returns:

None

"""

Step 1: Pass the user's prompt to the GPT API to get a refined prompt.

Step 2: Pass the refined prompt to the DALL-E API to get the generated im

Step 3: Save the generated image as `my\_img.png`.

return None

TRY IT!

Command was successfully executed.
