Question Answering

We have seen how GPT-3 answers questions based on existing knowledge. What happens if we ask it a question that it could not know based on existing data? Copy the question below and paste it into the file on the left. Click the TRY IT button to see the response, which appears in the file on the left.

Q: What is my name?

TRY IT!

Command was successfully executed.

You can use the reset button below to clear the text in the file on the left.

RESET

Notice how it tells you some variation of it does not know. We are going to show the model a pattern to use instead of saying "I don't know". Guide the model towards a factual answering by showing it how to respond to questions that fall outside its knowledge base. Using a [?] to indicate a response to words and phrases that it does not know provides a natural response that seems to work better than more abstract replies. Copy the entirety of the block below and paste into your box.

Q: Who is james bond?
A: James Bond is a fictional character created by Ian Fleming. Bond is a British se

Q: what is a lkdaos?
A: ?

Q: who was Barack Obama?
A: Barack Obama was the 44th President of the United States.

Q:what is ploasd?

TRY IT!

Command was successfully executed.

RESET

After running the code above try running a question it would know, such as the one below. GPT-3 responds with the correct answer because you are only training the model to respond with a [?] when it does not know the answer.

Q:what planet is the biggest in our solar system?

TRY IT!

Command was successfully executed.

RESET

GPT-3 also has the ability to generate answers for questions that require a complex response. For example, you can ask the model to return ten movies from the science fiction genre.

List 10 science fiction movies:

TRY IT!

Command was successfully executed.

RESET

You can use the reset button to clear the text file and create new and complex questions for GPT-3. Use the TRY IT button to generate another response.

What kinds of questions can GPT-3 answer? Select all that apply.

☐ Questions that require complex logic to answer

☐ Questions to which it could not know the answer

☐ Questions with a one-word answer

All of the above are correct. GPT-3 is a powerful model that accommodates a wide variety of questions that range from simple to complex. It can even respond in a coherent manner when it does not know the answer.
