Classification

GPT-3 can classify items into categories. Preface your prompt with instructions to classify a list of words.

```
classify the following : cat, dog , car , plane
```

TRY IT!

Command was successfully executed.

RESET

Command was successfully executed.

The model can use pattern matching to format the output of the classifications. The prompt below first asks GPT-3 to classify the list of objects. The next two lines are the pattern. List the object from the prompt and, on a new line, print `category:` followed by the classification of the object.

```
classify the following : cat, dog , car , plane
cat
category: animal
```

TRY IT!

Command was successfully executed.

RESET

The pattern matching above is similar to the way we guided the model in responding to questions that fall outside its knowledge base.

You can also ask GPT-3 to replace its own classification system with another. The examples below prompt the model to use the Entertainment Software Ratings Board (ESRB) rating system with an accompanying text. Compare the ratings between the two examples.

▼ What is the ESRB?

The ESRB is an organization that rates video game content (in Canada and the US) according to age and content. They use a system similar to the motion picture rating system.

Provide an ESRB rating for the following text:

"There was once a great ninja who lived in a small village in Japan. He was a maste

TRY IT!

RESET

Command was successfully executed.

Provide an ESRB rating for the following text:

"Once upon a time, there was a vampire who lived in a dark, dank castle. He was a f

TRY IT!

Command was successfully executed.

RESET

Command was successfully executed.

The GPT-3 model is adaptive in that it can use a third-party rating system for classification purposes.

Create a GPT-3 prompt and pattern that produces the following output:

```
Ford
Country -
United States

Toyota
Country - Japan

Kia
Country - South Korea

Ferrari
Country - Italy
```

Drag the appropriate code blocks into the box below. **Hint:** not all of the code blocks will be used.

Drag from here

Peugot

classify: Ford, Toyota, Kia, Ferrari

Country:

Construct your solution here

classify by country of origin: Ford, Toyota, Kia, Ferrari

Ford

Country -

The goal is to say what you want to classify and provide an example or how it should get started.

```
classify by country of origin: Ford, Toyota, Kia, Ferrari
Ford
Country -
```
