

Coding Exercise

File OpenAI

Rearrange the code blocks below to

- 1. upload your file
- 2. list your file

Since this is Python code please make sure to use indentation.

import os

import openai

openai.api_key = os.getenv("OPENAI_API_KEY")

with open("my_file.jsonl", "rb") as f:

openai.File.create(

file=f,

purpose="fine-tune"

)

files = openai.File.list()

print(files)

Per convention it is expected to have the libraries up and running first. Then the learned is instructed to upload and then list their files.

The following lines open a file in binary mode (rb) and create a new file resource in OpenAI's system using the `openai.File.create` method. This uploaded file will be used to fine-tune an OpenAI model.

```
with open("my_file.jsonl", "rb") as f:
    openai.File.create(
        file=f,
        purpose="fine-tune"
    )
```

Check It!
