1. Execute the Coursera Lab Jupyter notebook for this lesson, which implements the brute-force numeric approximation to Bayesian inference.

1 / 1 point

What is the root-mean-squared error between the true state and the estimate of the **mean** produced by the code? Enter your result with three digits to the right of the decimal point.

0.295

 **Correct**
Yes, that is correct.

2. For the same Coursera Lab Jupyter notebook, what is the root-mean-squared error between the true state and the estimate of the **mode** produced by the code? Enter your result with three digits to the right of the decimal point.

1 / 1 point

0.312

 **Correct**
Yes. That is correct.

3. For the same Coursera Lab Jupyter notebook, what is the root-mean-squared error between the true state and the estimate of the **median** produced by the code? Enter your result with three digits to the right of the decimal point.

1 / 1 point

0.296

 **Correct**
Yes, that is correct.
