Your latest: 100% • Your highest: 100% • To pass you need at least 80%. We keep your highest score.

1. Execute the code in the Coursera Labs Jupyter notebook for this lesson. What is the root-mean-squared error between the true state and the estimate of the state made by the particle filter? Enter your result with three digits to the right of the decimal point.

1 / 1 point

0.757

✔ **Correct**
Yes, that is correct.

2. For the same Coursera Labs Jupyter notebook, what is the root-mean-squared error between the true state and the estimate of the state made by the brute-force Bayesian-inference solution? Enter your result with three digits to the right of the decimal point.

1 / 1 point

0.589

✔ **Correct**
Yes, that is correct.

3. For the same Coursera Labs Jupyter notebook, change the number of particles from 500 to 1000. Re-run the notebook. What is the root-mean-squared error between the true state and the estimate of the state made by the particle filter? Enter your result with three digits to the right of the decimal point.

1 / 1 point

0.764

✔ **Correct**
Yes, that is correct. The result got worse! There is something fundamentally wrong with the SIS method that we need to investigate.
