(Optional) Downloading your Notebook and Refreshing your Workspace

This course uses **Coursera Labs** to provide a notebook environment and to grade your work. There might be some instances where you need to download your notebooks or refresh your workspace to start from scratch. This reading item outlines the steps to do so.

Downloading your Notebook

In case you need to download your notebook for troubleshooting or running in your local environment, you can follow these simple steps:

1. From the Menu Bar of the notebook you are working on, click **File** → **Save and Checkpoint** to first save your progress.
2. Click **File** → **Download as** → **Notebook (.ipynb)**. This should start downloading the file into your local machine.

Refreshing your Workspace

This will come in handy whenever you need to start from scratch, fetch the latest version of the assignment, or run into a 404 error.

1. Rename or delete every file you want to get a fresh new copy. You may skip this part if you already deleted the file.
2. In the upper right corner, click in the interrogation mark as shown in the picture below.

3. After, click in "Get latest version" as shown in the picture below.

Update lab to the latest version

This can be used to update to a new version or to start over. This will not replace any of your files. Move your existing files into a new folder before continuing.
