

Card Game Challenge Instruction

This page provides you instructions on the card game introduced in "1-5 Let's Play a Game". We encourage everyone to give it a shot, since the purposes of incorporating this game into our course are, to provide you with hands-on experience of a "game", and to let us actually examine how accurately game theory can predict human behavior.

At the end of this activity, we ask you to submit your result of the game. We are planning to disclose the result in summarized form, to see how all participants behave and if it obeys the prediction by game theory.

In order to avoid letting any preconceptions influence students' way of thinking before they play the game, please refrain from posting discussions related to this challenge onto the discussion board, when we will collect the data of the "Card Game Result Survey". For the same reason, we would like you not to submit the result if you do not actually play the game with a real human being.

Please note that no grade will be given to this activity. Your participation to this activity should be on a completely voluntary basis, and your answers will have no bearing on your course grades.

Necessary Preparation

- A deck of card (only following 8 cards are necessary: King, 1, 2 and 3 of spades and hearts)
- A coin (for coin-flipping)
- Result worksheet (download or Excel xls / xlsx format from below). Automatic calculation functions are embedded in the Excel files.
